

Q: What is excel HR?

Developed by the pioneers of laser hair removal technology in 2000, excel HR is the next generation premium laser hair removal technology for women and men of all skin types, even tanned skin patients, available all-year-round.

Q: What makes excel HR laser hair removal different from other laser hair removal technologies?

More coverage than ever before
 excel HR's signature truPulse technology delivers consistent and sustained energy in each and every pulse - efficiently reducing the number of treatments required.

Superior patient comfort

excel HR significantly improves patient comfort by offering continuous cooling before, during and after each laser pulse. In a patient preference study measuring comfort and satisfaction, 100% of patients chose excel HR laser hair removal over a competitive laser hair removal procedure.*

True laser technology

Unlike limitations of older technologies that use low-powered energy sources like pulsed light, excel HR only uses true, premium, laser sources to achieve the safest, most effective results for patients of all skin types.

Underarms

Spider Veins

Q: How many treatments does excel HR laser hair removal require?

The total number of treatments varies based on the area treated. Typically, 4-5 treatments spaced 6-8 weeks apart is recommended.

Q: Why does laser hair removal require multiple treatments?

Laser and other energy-based hair removal requires multiple treatments because hair grows in different phases. Hair can take 6-12 weeks for it to grow from root to surface - this growth stage is known as the anagen stage and this is the perfect time to receive laser hair removal. You know when you are due for your next treatment session when hair in the treated area begins to grow back. It is very important to stick with the treatments scheduled that your practitioners suggests - missing a treatment could allow your hair to enter the next stage where hair begins to detach from the hair follicle which can increase the number of treatments originally required.

Q: What areas can be treated?

Due to excel HR's superior technology exceptional results are achievable on all hair types- fine or coarse. Commonly requested areas include underarms, legs, bikini area as well as men's chest and back

Chest

shaving VS laser hair removal with excel HR

Spider Vein Therapy

Priced base on time (per session)

Laser Genesis non-ablative

Improves skin textures, redness/rosacea, enlarged pores and scars

Finally a solution for those hairy problems

Most women and even men perform the grooming ritual of shaving several times a week - an annoying and time-consuming chore for most. Shaving can become even more irritating when it affects your wardrobe choices. You know...those mornings when you get out of the shower, throw on your outfit, and rush out the door only to realize that you forgot to shave. So you debate...jump back in the shower, pick up a different outfit or throw caution to the wind and let it all hang out.
